

PROJECT PROFILE

SAM AIR-CONDITIONING

THE PROJECT

SAM Air-Conditioning is a small company that are expanding rapidly. To cope with their growth they needed to install additional computer and networking equipment into their office.

THE PROBLEM

As SAM operates out of a small office in Kent Town, SA, they did not have a data room or data cupboard that they could use for their new equipment. The only option was to have a cabinet in an unobtrusive part of the office. The cabinet would need to hold some rack mounted computer equipment, be easy to access when required and be visually appealing, to suit a clean corporate style.

THE B&R SOLUTION

B&R's Ausrack Lite used was a 22RU, 600 deep size, ideal for this type of application. It is small and unobtrusive, but offers accessories such as power rails, fans, feet and castors as part of the package. This means that for office applications, you don't need to go through huge lists of accessories to get what you would normally need as standard.

THE RESULT

The customer was impressed with the quality of the product and smart cabling solution that offered a neat and presentable finished product.

Paul Rimington, Data Specialist from Rexel Electrical Supplies said that the package deal of the rack and accessories, along with the competitive price made Ausrack Lite the best solution for his customer's needs. "We will be offering Ausrack Lite in the future", he said.
