

B&R LEADING THE WAY IN WESTERN AUSTRALIA

READY TO GO!!

B&R are proud to introduce our new WA series of metering enclosures which have been designed to meet the installation requirements of West Australian contractors. Everything is in the WA130V, ready to install straight out of the carton. It even has a hanging bracket on the back for use as a temporary supply in a permanent position.

Our new WA Meter Enclosure satisfies the Western Power SIR's requirements and meets the AS/NZ3012 requirements for use as a temporary supply in a permanent position.

For more info on our new WA Series of metering enclosures please contact us to speak to a sales representative.

Designed by West Australians for West Australians...

Features & Benefits

U/GBP

Features

Increased DIN Poles without increasing closure size

Easy cable access of DIN section from top to bottom

Future space for supply authorities remote meter reading

AS/NZS3012 compliant

NATA tested to IP23

Suits U/GBP Bracket

Benefits

Offers the contractor a choice to suit their installation needs

By repositioning the DIN section to the side of the enclosure, cable entry is now simplified and accessible from the top, bottom or rear of the enclosure

Can be locked for increased security

Meets the requirements for use as temporary supply in a permanent position

Required by SIR's and has been independently tested

Easy installation for temporary supply in a permanent position
