

## PROJECT PROFILE

### PIPELINE CATHODIC PROTECTION

### BROOKLYN TO LARA GAS PIPELINE

#### THE PROJECT

Cathodic power unit installed on the Brooklyn to Lara gas pipeline project in Melbourne's Inner West. The unit is installed to match the potential of the pipes to the surrounding ground preventing the circulation of current and corrosion of the pipe system.

#### THE PROBLEM

The application required a robust enclosure system with flexible mounting of internal accessories and secure locking facilities for installation in a vandal prone area.

#### THE B&R SOLUTION

The B&R Enclosures IP Monarch, powder coated in Hawthorne Green was chosen to blend with the local environment. Standard B&R Enclosures mounting pan, mounting brackets and lever handle lock along with a custom made internal escutcheon installed to the inner walls via the standard mounting system.

#### THE RESULT

Delivered on time to customer requirements.
