

PROJECT PROFILE

RTA SYDNEY – EARLY WARNING SYSTEM

THE PROJECT

The CBD speaker systems is a public address system designed to reach the public promptly in the central business district of Sydney. The speaker unit was originally housed in a plastic enclosure with the peripheral connections hardwired.

THE PROBLEM

The speaker unit was originally housed in a plastic enclosure with the peripheral connections hardwired. To improve the reliability of the system and to make the replacement of units easier.

THE B&R SOLUTION

By using a customised Universal NI stainless steel, all the peripheral connections were changed to be plug and socket based and a shelf for batter storage was also included.

THE RESULT

By working closely with the customer, B&R has been able to satisfy their needs. The solution has significantly improved the reliability of the system with no moisture damage to the electronics since changing over to the new enclosures.
