

PROJECT PROFILE

SUNDAY TIMES REDEVELOPMENT PROJECT

THE PROJECT

The Sunday Times is redeveloping their site in Northbridge to modernise not only the equipment but also the aesthetics of the building. They will be doing this in 2 stages, of which the IT data centre will be part of stage 1.

THE PROBLEM

Customer required a solution where the 19" rails are movable to allow for the extra depth of the HP servers. Cable management and flexibility of the system were also other considerations.

THE B&R SOLUTION

The Ausrack range of B&R was the perfect solution for their requirements, with the features and accessories the server range offered. B&R also designed 20 way combination power rails to meet their requirements.

THE RESULT

Installation of the cabinets went well, by a third party contractor, (Total Connect) who took 6 weeks to fully install the centre. The Sunday Times used a Systemax solution.
