

## PROJECT PROFILE

DAMPIER SALT LIMITED

### DAMPIER SALT (H.I.) NORTH SHORE

#### THE PROJECT

Construction of new conveyors, stacker reclaimers, hoppers and other equipment.

The project was located at Dampier in the Pilbara Region, some 1800km north of Perth. The project budget was A\$50M to be completed over 9 to 12 months by December 2004.

#### THE PROBLEM

The application required robust enclosures, to cover a range of environmental conditions, that also addressed O.H.S. with regard to marshalling enclosures located near conveyor belts & inspection walkways.

Due to the tight schedule of the project, the customer required fitting out of enclosures to specification, on time & at a competitive price.

#### THE B&R SOLUTION

The standard Pilbara SP, along with a modified skinny version of the Pilbara, & painted/modified SR enclosures. NI's & TE's were also used.

WA's value add section was involved in much of the fitout, as was Moeller using B & R painted stainless steel & zincanneal enclosures.

#### THE RESULT

Delivered on time and, as per specification, meeting the consultant's & end user's expectations. Value to B & R \$250-\$300,000 initially, but will underwrite supply of enclosures to nearly all if not all H.I. mining upgrades & new projects.
