# About B&R Enclosures

Since 1955, B&R Enclosures has built a reputation for excellence in design and production, culminating in our position as Australia's largest enclosure manufacturer and electrical equipment integration specialist.

As an independent, 100% Australian family owned and operated business, we champion the virtues of quality, innovation, service and value. The emphasis on these aspects has sustained B&R's growth leading to Australian manufacturing and distribution facilities in Brisbane, Adelaide and Sydney and internationally in China and Saudi Arabia.

B&R's knowledge, precision, quality and unwavering commitment to creating repeatable solutions for our clients supports our position as preferred manufacturer for many private, government and commercial projects in some of Australia's harshest environments.

B&R champions the virtues of quality, service and value. Combined with our unrivalled industry and application knowledge, we are in a unique position to meet the needs of our clients. The business encompasses four divisions: Industrial, Data ICT, Hazardous Areas and Residential Commercial. Each division focuses on the unique needs of different market segments.

B&R regularly works with partners to provide integrated solutions for major infrastructure and hazardous projects. These include 'plug and play' switchboard solutions for Rio Tinto's Oyu Tolgoi mine and local control stations for Ichthys on-shore LNG processing plant. Ongoing relationships and collaboration are results of our ability to articulate the customer's problem and combine previous experience and knowledge with compliance to local standards.

Electrical integration usually involves the installation, commissioning and testing of 3rd party components and we are adept at managing the acquisition and storage of technical components through a global supply chain that is structured, customised, agile, repeatable and results-based.

Project management and execution is effectively managed at B&R by the co-location of design, supervision, supply coordination and quality control along with manufacturing. Our incorporation of Industry 4.0 delivers real-time data to our project management teams, built around the requirements of individual projects.

Extensive investment in research and development includes an environmental testing facility focussing on climate control to support cooling solutions for equipment exposed to high ambient temperatures and solar radiation.

When utilised as designed, B&R's enclosures are built to out-perform against expectations.

Contact us today to find out how B&R can deliver reliable and trusted outcomes for your project.

# Our Locations

B&R Enclosures have purpose-built manufacturing facilities in three locations across Australia, as well as strategic locations in the Gulf and China.

## Australia

### *Brisbane (QLD)*

Global head office, manufacturing, sales and warehousing

### *Sydney, NSW*

Hazardous manufacturing, sales and warehousing

### *Adelaide, SA*

Manufacturing, sales and warehousing

### *Townsville (QLD), Newcastle (NSW),*

### *Melbourne (VIC), Perth (WA)*

Sales and warehousing

### *Launceston (TAS), Darwin (NT)*

Distribution

## New Zealand

### *Auckland*

Sales and warehousing

## Saudi Arabia

### *Dammam*

Hazardous manufacturing, sales and warehousing

## China

### *Suzhou*

Manufacturing, sales and warehousing

# Our Capabilities

Over the years as the company has grown, we have invested significantly in machinery, technology and testing to be able to provide capabilities which our customers benefit from in every order they place. Our current capabilities include:

- Purpose-built Australian facilities in Brisbane (18,000m<sup>2</sup>), Adelaide (4,000m<sup>2</sup>) and Sydney (1,874m<sup>2</sup>), providing local labour and logistics
- Complete in-house design and engineering services to assist with creating custom solutions
- Dedicated facilities for design, manufacture, wiring and distribution of hazardous area electrical equipment
- End-to-end manufacturing, from coiled steel raw material to commissioning the end product, we provide efficiency and complete quality control
- Variety of substrates and high quality finishes including stainless steel, powder coated and zinc to suit even the most demanding application
- Modern machinery for any design to be formed and fabricated including automated sheet metal panel benders, punching and shearing centres, electrical equipment integration lines, press brakes, powder coat lines, fabrication cells and assembly lines
- Fully documented process available with full configuration management to support a detailed documentation experience
- Complete project management including supply chain, warehousing and logistics
- In-house and external testing for hazardous area electrical equipment and impact, IP, type testing, static load, seismic, wind load, salt spray, line inspection, shock, vibration, EMC and MIL-STD
- Continuous improvement with our environmental testing facility for ongoing research and development
- Existing supply agreements with leading OEMs and major raw products distributors supporting loyal and valued relationships climate control and cooling solutions

# Our Supply Strategies

## Made to Stock

These products are available ex-stock from all our sales & warehousing branches. Contact your local sales representative to discuss requirements.

## Assembled-to-Order

These products are assembled to order upon receipt of a customer order. All components required to build an ATO item cannot be sold separately and must form part of a kit. Standard lead time is 4-6 weeks from date of order.

## Made to Order

These products are manufactured according to a customer's specification. They are marked in our catalogues as "▲ Available on request" and have a standard lead time of 2-3 weeks.

## Engineered-to-Order

These products are a custom designed product that is 100% fit-for-purpose, delivered on-site and ready for installation. Our design & engineering team can customise an enclosure to suit the application requirements. Contact us for more information.

# Customisable Project Services

## Collaboration

- Convert customer requirements to product build specifications
- Work to customer delivery schedule
- Initiate procurement or consignment of stock allocations
- Supply of equipment configuration

## Complete Project Management

- One point of contact
- Responsive communication channels
- DIFOTIS - Delivered In Full On Time In Specification
- Accountability for the delivery of our commitment to customers

## Electrical & Equipment Integration

- Wiring and equipment installed to exact requirements
- Management of free issue, consigned and/or B&R sourced components and equipment
- Stock reporting and job allocation

## Testing & Reporting To Customer Specifications

- Digital reports of product testing and acceptance
- Serialised codes to customer requirements, digital signature, component traceability and unique identifiers
- Real time quality assurance authorisation, approval and confirmation

## Customer Specific Logistics

- Storage and warehouse management
- Site delivery logistics
- Option for removal of product packaging after installation

# The B&R Engagement Loop (Project Services)

In order to engage successfully with our project customer's, B&R representatives follow a structured service plan.

We take our responsibility seriously, and pride ourselves on the collaborative and open relationships we undertake with our project customers. This makes sure we understand and provide value, because our customer's needs vary greatly across the different types of project applications and technical requirements.

1. Our first action before we reach out or after a customer had reached out to us, is to **INVESTIGATE**. This includes researching the customer/ project and any other relevant stakeholders.
2. The second action of **UNDERSTAND** is when we speak to the customer at length about their issue and challenges for current and future projects. From these discussions we can begin to see how our product solutions can solve the customer's issues and challenges.
3. We take our newly acquired customer knowledge back to our in-house design, engineering and estimating teams for our third action to **SCOPE** the work, and prepare quotes and drawings as required.
4. Once we have created the tailored offer for the customer we process any variations which might be needed before our fourth action of **AGREE**. With everything signed off we move into manufacturing and equipment integration.
5. Once the product solution is ready our fifth action of **DELIVER** takes place. We make sure the goods are shipped to site according to agreed upon timelines.
6. To learn from our experience and confirm our service level we take an **EVALUATION** action. This is when we reflect on the job we've completed and depending on the size and extent of the order we will seek customer feedback as well.

# Our Customers

## Accreditations & Compliance

At B&R, quality and value are just the beginning. We strive to deliver quality products developed and manufactured by a team dedicated to excellence, backed by standards, approvals and industry accreditations.

ISO 9001:2015

Every B&R Enclosures manufacturing facility is externally audited to ensure that the quality of our products meet the stringent ISO9001 standards. B&R's products are carefully inspected at the end of lines during the manufacturing process to ensure that the enclosures will withstand their intended environment and application.

ISO 14001:2015

Sets out the criteria for an environmental management system. It maps out a framework that a company or organisation can follow to set up an effective environmental management system.

ISO 45001:2018

An externally audited Occupational Health and Safety Management System.

RoHS

The RoHS directive aims to restrict certain dangerous substances commonly used in electronic and electronic equipment.

Australian Stainless Steel Development Assoc.

ASSDA

The Australian Stainless Steel Development Association provides comprehensive technical information on stainless steel. This includes information for users, equipment manufacturers and stainless steel suppliers.

IEC IECEx

IECEx is the IEC System for Certification to Standards Relating to Equipment for Use in Explosive Atmospheres. It uses quality assessment specifications that are based on International Standards prepared by the International Electrotechnical Commission (IEC).

# Technical Information

B&R Hazardous Area products are certified and approved for use in above ground Group II applications.

## WHAT IS A HAZARDOUS AREA?

A hazardous area is an area where flammable liquids, vapours, gases or combustible dusts are likely to occur in sufficient quantities to cause fire or explosion.

There are three basic conditions that must be satisfied to create a fire or explosion.

1. Flammable or combustible material – such as flammable liquid, vapour or combustible dust must be present in sufficient quantity and concentration.
2. Oxygen
3. Ignition source

Hazardous area electrical equipment works by suppressing or separating one or more of these three components to avoid a fire or explosion. Where suppression cannot be done the use of explosion containment Ex d is used.

## IGNITION SOURCES

- Electric arc and sparks
- Flames
- Hot surfaces
- Electrostatic sparks
- Thermite sparks
- Mechanical friction
- Mechanical sparks produced by grinding
- Smouldering deposits
- Compression ignition
- Electromagnetic radiation
- Chemical reactions
- Ultrasonics

## IEC STANDARDS & CERTIFICATIONS

IECEx is an internationally recognised scheme for the certification of hazardous area electrical equipment. The IECEx system is designed to facilitate international trade in equipment and services for use in hazardous areas, whilst maintaining the required level of safety.

## SELECTION OF ELECTRICAL EQUIPMENT

There are important pieces of information required when selecting equipment for hazardous areas. These include:

- Zone classification
- Gas group
- Temperature or 'T' Rating
- IP Rating
- Application

## TYPICAL HAZARDOUS AREA INDUSTRIES:

### Gases and Vapours

- Oil refineries & chemical plants
- Offshore drilling rigs
- Spray booths
- Sewerage treatment plants
- Oxygen and acetylene
- Aircraft hangers
- LNG plants
- Wharves for petroleum & LNG vessels
- Paint manufacturers
- Distilling
- Laboratories & fume cupboards

### Dust

- Food manufacturing
- Grain handling & storage
- Chemicals / fertiliser
- Plastics
- Wood / pulp / paper
- Milk powder
- Flour mills
- Pharmaceuticals
- Metal processing
- Recycling operations
- Fibreglass manufacturing
- Explosive factories

# Technical Information

## Zone classifications

### ZONE CLASSIFICATIONS

Equipment that is used in hazardous areas is classified into zones, depending on the potential of an explosion under normal operating conditions. The table below is a guide to zone classification of hazardous areas. B&R Enclosures do not classify areas for customers, it is the responsibility of the installer or end user to know which zone their area falls within.

It is recommended a qualified person is engaged to complete a risk analysis and classify the area in accordance with standard IEC 60079-14.

The hazardous areas are classified in the table below according to IEC 60079-10-1 and IEC 61241-10-2. The IEC Standard is the international standard and local standard must be used where applicable.

Gases and Vapours		Dust	
Zone 0 Ga	An area in which an explosive gas-air mixture is continuously present or present for long periods.	Zone 20 Da	An area in which an explosive dust-air mixture is continuously present or present for long periods.
Zone 1 Gb	Area in which an explosive gas-air mixture is likely to occur for short periods in normal operation.	Zone 21 Db	Combustible or conductive dusts are present, and is likely to occur for short periods in normal operation.
Zone 2 Gc	Area in which an explosive gas-air mixture is not likely to occur and if it occurs it will only exist for a very short time due to an abnormal condition.	Zone 22 Dc	Area in which an explosive dust mixture is not likely to occur and if it occurs it will only exist for a very short time due to an abnormal condition.

# Technical Information

## Gas groups, temperature ratings and dust

### GAS GROUPS

Electrical apparatus for use in areas with flammable gases and vapours are divided into groups:

Group I	Underground coal mining applications.
Group II	Industries other than underground coal mining.
Group III	Industries having combustible dust or fibres.

Group II is subdivided into 3 group groups based on their explosive properties (see table below).

Groups	Example Types
Group I	Methane
Group IIA	Propane
Group IIB	Ethylene
Group IIC	Hydrogen, Acetylene, Carbon Disulphide

### TEMPERATURE OR 'T' RATING

Hot surfaces are a potential ignition source in hazardous applications. Hazardous materials will have different minimum temperatures at which ignition becomes a danger.

Electrical equipment for hazardous areas is tested and allocated a 'T Rating' based on the maximum temperature of the equipment.

The 'T Rating' must always have a lower maximum temperature than the ignition temperature of the gas group present. Temperatures are either measured internally or externally depending on protection.

T Rating	Maximum Temperature
T1	450°C
T2	300°C
T3	200°C
T4	135°C
T5	100°C
T6	85°C

Examples of ignition temperatures and 'T' ratings for gases.

Example Gas	Ignition Temperature	T Rating
Methane	580°C	T1
Hydrogen	500°C	T1
Kerosene	295°C	T3
Petroleum	400°C	T2
Carbon Disulphide	95°C	T6
Diethyl Ether	160°C	T4
Ethyl Nitrite	95°C	T6
Hydrogen Sulphide	270°C	T3

### COMBUSTIBLE DUST

Dust fibres or flyings, which are combustible or ignitable when mixed with air are known as combustible dusts. Dust explosions may be initiated by ignition of a cloud of dust. It is not unusual for an explosion, which starts from the ignition of a dust layer, to cause the dislodging of dust accumulated on various surfaces, which then leads to a chain reaction dust cloud explosion.

Characteristics of some common combustible dusts are:

Material	Ignition temperature	
	Cloud, °C	Layer, °C
Coal Dust	380	225
Polythene	420	(melts)
Methyl Cellulose	420	320
Starch	460	435
Flour	490	340
Sugar	490	460
Grain Dust	510	300
Phenolic Resin	530	>450
Aluminium	590	>450
PVC	700	>450
Soot	810	570

NOTE: The data given in this table is derived from AS2430.2:1986 (superseded by AS/NZS 61241.3 which is superseded by AS/NZS 61241.10)

# Technical Information

## Types of protection for electrical equipment

### TYPE OF EXPLOSION PROTECTION FOR ELECTRICAL EQUIPMENT

Type of Protection	Description	Standard	Zone
Flameproof enclosure Ex d	Containment – explosion within an enclosure will not be propagated outside the enclosure.	IEC 60079-1	Zone 1 & 2
Pressurised enclosure Ex p	Enclosure in a protective gas is maintained at a pressure greater than that of the external atmosphere.	IEC 60079-2	Zone 1 & 2
Powder Filling Ex q	Mounting of potentially incandive components in an enclosure filled with quartz or solid glass particles.	IEC 60079-5	Zone 1 & 2
Oil Immersion Ex o	Equipment or parts are immersed in protective liquid such as oil. The protective liquid acts as an insulating medium.	IEC 60079-6	Zone 1 & 2
Increased safety Ex e	Non sparking components are designed to substantially reduce the likelihood of the occurrence of fault conditions which could cause ignition.	IEC 60079-7	Zone 1 & 2
Intrinsic safety Ex i	The potential spark energy of a circuit is reduced to below the amount required for ignition.	IEC 60079-11	Zone 0, 1 & 2
Non-sparking Ex n	Electrical apparatus in normal operating conditions and in certain specified abnormal conditions, that is not capable of igniting a surrounding explosive gas atmosphere.	IEC 60079-15	Zone 2
Encapsulation Ex m	Parts that are capable of igniting an explosive atmosphere by either sparking or heating, are enclosed in a compound so that the explosive atmosphere cannot be ignited under operating or installation conditions.	IEC 60079-18	Zone 0, 1 & 2
Dust protection by enclosure Ex t	Electrical equipment is protected by the enclosure and surface temperature limitation for use in explosive and dust atmospheres.	IEC 60079-31	Zone 20, 21 & 22

# Ex d Enclosure - Aluminium

Zones 1 & 2, 21 & 22

- Certified for use in Zone 1, 2 & 21, 22 hazardous areas.
- Suitable for use as junction boxes, control stations, terminal boxes, local control stations, motor starters motor distribution and switchracks.
- Designed to house pushbuttons, terminals and cable terminations.
- For protection of electrical equipment in applications where flammable liquids, gases and vapours or combustible dusts are present.
- Full range of pushbuttons, stop buttons, pilot lights and selector switches available for integration.
- Customised etched identification labels.
- Epoxy coated.
- Windows available on request.
- Manufactured from Copper Free Aluminum Alloy.

Comes standard with:

- Stainless steel hinges
- External stainless steel mounting feet
- Internal mounting pan
- Internal/ external earth stud
- Drilled and tapped entries as required

# Sloping Roof Control Station

Zones 1 & 2, 21 & 22

- Suitable for use within chemical, petrochemical, dust and grain applications where a small enclosure is required.
- 40° sloping roof with 40mm overhang ensures material slides off the roof and is directed away from the top of the door.
- Available with or without gland plate.
- Gasket material Black Neoprene.
- Silicon option available on request IP65 and IP66 only.
- Certified IP66 glass viewing windows available (298 x 218 or 198 x 118).
- Manufactured from 1.5mm 316 stainless steel with N4 surface finish.

Comes standard with:

- Steel mounting pan
- 7mm stainless steel lock
- External mounting flange
- Internal and external 6mm or 8mm earth stud (10mm available on request)
- 3mm stainless steel gland plate
- Earth strap kit
- Brass gland plate available on request
- Customised etched identification and certification label

# Sloping Roof Terminal Enclosure

Zones 1 & 2, 21 & 22

- Suitable for use within chemical, petrochemical, dust and grain applications where a small enclosure is required.
- 40° sloping roof with 40mm overhang ensures material slides off the roof and is directed away from the top of the door.
- Available with or without gland plate.
- Gasket material Black Neoprene.
- Silicon option available on request IP65 and IP66 only.
- Certified IP66 glass viewing windows available (298 x 218 or 198 x 118).
- Manufactured from 1.5mm 316 stainless steel with N4 surface finish.

Comes standard with:

- Steel mounting pan
- 7mm stainless steel lock
- External mounting flange
- Internal and external 6mm or 8mm earth stud (10mm available on request)
- 3mm stainless steel gland plate
- Earth strap kit
- Brass gland plate available on request
- Customised etched identification and certification label

# Screwed Flat Roof Control Station

Zones 1 & 2, 21 & 22

- Suitable for Hazardous environments in the most demanding conditions.
- Enclosures suited for Zones 1 & 2, 21 & 22.
- Manufactured from 1.5mm thick 316 stainless steel.
- N4 surface finish.

Comes standard with:

- External fixed mounting flanges
- External earth stud
- Internal earth strap kit
- Gasket material Black Neoprene.
- Silicon gasket available on request for IP65 and IP66
- Screwed lid
- Stainless steel fixings
- Internal mounting pan available on request
- Customised etched certification and identification label
- Factory fitted, full range of IECEX certified operators available

# Fixed Lid Control Station

Zones 1 & 2, 21 & 22

- Suitable for use within chemical, petrochemical, dust and grain applications where a small enclosure is required.
- Available pre-configured or customer built for ease of installation from one to six operators.
- Specially designed gutter system to protect equipment.
- Certified control operators.
- Gasket material EDPM black.
- Silicon gasket available on request for IP65 and IP66 only.
- Mounting hardware NOT supplied with product.
- Manufactured from 1.5mm 316 stainless steel with N4 surface finish.

Comes standard with:

- Stainless steel cover fixings
- Mounting flanges
- Earth strap kit
- Customised etched certification and identification label
- 2 x M20 bottom clearance holes, 1 entry fitted with certified plastic plug

# GRP Control Station

Zones 1 & 2, 21 & 22

- Suitable for Hazardous environments in the most demanding conditions.
- Enclosures suited for Zones 1 & 2, 21 & 22.
- Light-weight and impact resistant and easy to install.
- Can be customised to suit requirements.
- Flexible configurations.
- High chemical stability.
- Ex de | Ex t D component certified operators and ammeters.
- Manufactured from UV stabilised anti-static construction.
- Surface finish - Textured matt black

Comes standard with:

- Internal brass gland plates  
1 x M20 entry
- Connection joint available to combine two enclosures
- Stainless steel screws
- Customised etched certification and identification label
- Push buttons rated at 16 Amp 250V
- Indicating lamps 1W, 50V-277V AC/DC

# GRP Terminal Box

Zones 0 & 1, 2, 21 & 22

- Certified for use in Zones 0, 1, 2 & 21, 22 hazardous areas
- Designed to house terminals.
- For protection of electrical equipment in applications where flammable liquids, gases and vapours or combustible dusts are present.
- Light weight, compact and easy-to-install.
- Cable can connect to terminals from different directions.
- Max rated voltage AC690V.
- Anti-static glass fibre reinforced polyester (GRP) with stainless steel screws.

Comes standard with:

- Internal sealing silicone gasket
- Earth continuity
- Terminals

# GRP Terminal Enclosure

Zones 0, 1, 2 & 21, 22

- Suitable for both dust and petrochemical areas where stainless steel is not a requirement.
- Impact resistant and able to withstand high or low temperatures.
- More than one enclosure able to be joined together using certified connecting boards.
- Light weight and flexible in design to accommodate a variety of terminal layouts ranging from 2.5mm to 300mm.
- Can be used with IS terminals.
- Tamper proof internal mounting holes.
- Maximum voltage is 1100V and 400A maximum current.
- Manufactured from
  - Body - GRP UV-stabilised anti-static
  - Surface finish - textured matt black

Comes standard with:

- Earth plate for cable gland entries
- Laser etched certification label
