

MIX Series

An air-air heat exchanger designed for cooling enclosures.

- Suitable for applications where the enclosures internal temperature is much higher than the ambient temperature.
- Cooling output from 14kW to 80 kW.
- Maintenance is minimised by using highly optimised heat exchanger surface designed to reduce fouling.
- Can be installed inside or outside the enclosure.
- Other supply options available on request.
- All fixings required for assembly are provided.
- Manufactured from mild steel.
- Powdercoated Pebble Grey RAL7032.
